

ABSTRACT

A computer program product, system, and methodology
to provide for assisting a caregiver in caring for
5 individuals. An electronic life ledger is maintained
for each individual and has that individual's vital
information data stored therein in a database. The life
ledger comprises a plurality of web pages for inputting
and editing the individual's medical history, budget
10 information, physician information and so forth. The
life ledger is accessible over a computer network making
the individual's vital information data is available in
an instant. A fee is charged to the caregiver for each
electronic Life Ledger purchased.
